EXECUTIVE SUMMARY

The Way We Use Our Wardrobes Is Broken.

Wearism is an AI-powered fashion intelligence platform that transforms how people interact with their clothes — making styling smarter, consumption more intentional, and fashion genuinely sustainable. We combine proprietary computer vision, deep learning, and community-driven social features into one seamless mobile experience.

The core AI is built. The frontend is complete. We are 60% through total product development — with a clear, funded path to commercialisation.

\$1.7T Annual wardrobe inefficiency	80% Clothes that go unworn daily	17 min Wasted on outfit decisions — daily	92M T Textile waste generated per year
--	---	--	---

THE PROBLEM

A Trillion-Dollar Wardrobe Crisis

The fashion industry has a paradox at its core: people own more clothes than any generation before them, yet feel less equipped to dress well. This is not a supply problem — it is an intelligence problem.

For Consumers

- 80% of a typical wardrobe goes unworn on any given day, despite significant financial investment
- The average person spends over 100 hours a year deciding what to wear — a daily friction point that never goes away

- Generic styling apps and AI tools ignore the most important variable: what the user already owns
- Uninformed purchasing leads to regret, clutter, and discarded clothing within months of buying

For the Planet

- Fashion accounts for 10% of global carbon emissions – more than aviation and shipping combined
- 92 million tons of textile waste are generated each year
- A garbage truck of clothing is incinerated or sent to landfill every single second

The Gap No One Has Filled

Wardrobe apps offer cataloging without intelligence. AI styling tools give advice without context. Marketplaces exist to sell more. None of them address the real problem: helping users unlock the value of what they already own, in a way that truly understands who they are.

C O R E F E A T U R E S

Five Modules. One Ecosystem.

01 – Social Fashion Feed

Wearism is not just a utility – it is a community. Users share daily outfits, receive trusted feedback from friends, and discover people with similar style profiles. The social layer drives organic growth, enriches the AI with real-world data, and creates the daily habit loop that keeps users returning.

- Post daily outfits (OOTD) and receive real-time feedback from followers and friends
- Private style circles for intimate groups and trusted friends
- Community challenges, themed inspiration feeds, and collaborative styling sessions
- Discover style-compatible users based on wardrobe DNA – not just aesthetics or trends

02 – AI Outfit Rating

Upload a photo and receive an instant, science-backed assessment of your outfit. Wearism evaluates fit, colour harmony, and style coherence – then explains the reasoning in plain language, building genuine fashion literacy over time.

- Outfit scored on a 1-10 scale across fit, colour balance, and occasion suitability
- Body-aware analysis: age, height, and body type inform every recommendation
- Occasion checker – formal, business casual, date night, gym, and more

- Plain-English explanations for every rating, not just a number

03 — Smart Wardrobe & AI Outfit Generation

The wardrobe is the heart of Wearism. It builds itself — users never manually add a single item. The experience is frictionless from day one.

Zero-Effort Wardrobe Building

- Post any outfit photo — the AI automatically segments every clothing item, tags it with category, colour, season, and formality, and saves it to the digital wardrobe
- Connect Instagram — all past and future posts are scanned automatically, building the wardrobe retroactively with zero manual input
- Bulk upload dozens of wardrobe photos at once for instant full digitisation

7-Day AI Outfit Planner

- The AI generates a personalised week of outfits built entirely from items already in the user's wardrobe
- Custom parameters per day — Monday formal, Thursday casual, Friday dinner date
- Real-time weather integration ensures suggestions are always seasonally appropriate
- Mix-and-match combinations users would never think to try themselves, discovered automatically
- Cost-per-wear analytics, usage statistics, and gap analysis surface what is actually missing

04 — Wardrobe Swapping & Sustainability

This is Wearism's most distinctive feature and the one with the deepest environmental impact. Rather than discarding items or buying new ones, users match with friends and local community members to swap clothing directly through the platform.

- Browse friends' wardrobes and send swap proposals for specific items
- AI matches users based on size compatibility and style alignment
- Each swap is tracked with mandatory shipping verification and photo confirmation
- Temporary loans and permanent exchanges are both supported and digitally logged
- Every swap shows the user how much CO₂ has been diverted and water saved — making impact tangible

This directly addresses the root cause of textile waste — not by telling people to buy less, but by making the sustainable alternative genuinely convenient and socially rewarding.

05 — Vendor Market Hub & Wardrobe Connection Layer

Wearism creates a privacy-first intelligence bridge between users and fashion brands — one that benefits both sides without ever compromising personal data.

For Users

- Product recommendations based on real wardrobe gaps, not browsing history or paid placements
- Size predictions informed by body measurements already held on the platform
- "Shop the Look" — purchase items from outfits admired in the community feed
- Wishlist with price drop alerts and style-matched new arrival notifications

For Vendors

- Register as a brand and access a live demand dashboard showing real wardrobe gap data in aggregate
- Zero-Knowledge AI matching — brands target high-intent users by wardrobe need, never by personal identity
- Predicted click-through rates, return risk scores, and category intelligence before any ad spend
- Inventory management, sponsored placements, and conversion analytics all in one dashboard

This is not a fashion marketplace. It is an intelligence layer. Brands stop guessing what customers need and start responding to verified, anonymised demand signals from real wardrobes.

M A R K E T O P P O R T U N I T Y

A \$90 Billion Market in Motion

\$2.9B AI in Fashion — 2025	\$89.4B AI in Fashion — 2035	40.8% CAGR (2025-2035)	500M+ Target users globally
---------------------------------------	--	----------------------------------	---------------------------------------

The convergence of AI maturity, sustainability consciousness, and a mobile-first generation creates a rare window of opportunity. McKinsey projects global fashion technology spending to double by 2030. No single platform currently owns the intersection of AI styling, social community, wardrobe management, and brand intelligence.

B U S I N E S S M O D E L

Multiple Revenue Streams. High Margins.

Revenue Stream	Model	Projected (Year 3)
Freemium Subscriptions	\$9.99/mo Premium · \$19.99/mo Pro	\$9M+
Marketplace Commission	15-20% on in-platform purchases	\$9M-\$18M
Vendor Placements	Featured spots, sponsored recommendations	\$2M-\$5M
B2B Licensing	White-label AI, API access for retailers	\$3M-\$8M
Data Insights	Anonymised trend reports for brands	\$1M-\$3M

The free tier drives mass adoption. Premium converts engaged users. The vendor layer monetises the data flywheel. Gross margins are projected to exceed 70% by Year 3 – software-native unit economics with no physical inventory.

Financial Projections — Conservative Estimate

Year	Users	Revenue
Year 1	50,000	\$1.2M
Year 2	200,000	\$5.5M
Year 3	500,000	\$20M
Year 5	2,000,000	\$75M

T A R G E T A U D I E N C E

Who Wearism Is For

Primary — Gen Z & Millennials (18-35)

- Fashion-conscious consumers who expect personalisation and reject generic advice
- Environmentally aware and receptive to sustainable alternatives that don't compromise on style

- Mobile-native and active on social platforms — primed for sharing, discovery, and community content

Secondary — Style-Conscious Professionals (35-50)

- Time-poor individuals who value efficiency in daily dressing and wardrobe planning
- High wardrobe investment with strong motivation to better utilise existing pieces

B2B — Fashion Brands & Retailers

- Brands spending heavily on digital advertising with poor targeting precision and high return rates
- Emerging and sustainable brands seeking purpose-aligned, high-intent audiences

COMPETITIVE ADVANTAGE

Built to Be Difficult to Replace

- **Zero-effort onboarding** — The wardrobe builds itself from outfit photos and Instagram — removing the single biggest barrier to adoption in competing apps
- **Network effects** — Every user, outfit, and swap enriches the AI and strengthens the community. Value compounds with scale
- **Deep personalisation** — Wearism understands who the user is — body, style, and wardrobe — not just what is trending online
- **Privacy-first vendor layer** — Brands access demand intelligence without user data exposure — a model that scales regulatory trust
- **Sustainability by design** — Swapping, gap analysis, and cost-per-wear make responsible fashion the path of least resistance, not a compromise
- **Proprietary AI pipeline** — Purpose-built fashion intelligence — not a generic model retrofitted for fashion use

INVESTMENT OPPORTUNITY

What Investment Unlocks

- Mobile app development and deployment on iOS and Android
- Cloud infrastructure, scaling capabilities, and global CDN
- Beta launch with early adopters, influencer partnerships, and user acquisition campaigns

- Vendor marketplace build-out and initial brand partnerships
- Team expansion across product, growth, and fashion domain expertise

We are not at the idea stage. The technology is real, tested, and already delivering results. Investment accelerates the final mile – from validated prototype to a market-ready product at scale.

THE TEAM

Founded by Engineers. Driven by Purpose.

Zarnab Ali – Co-Founder & CEO of Wearism

Deep learning and facial recognition specialist. Led the development of the age estimation pipeline. Contact: zarnabalibhatti@gmail.com

M. Abdullah Jilani – Co-Founder & Business Analyst

Computer vision and fashion AI specialist. Built the clothing classification system powering the Smart Wardrobe.

Mian Ghulam Husnain – Co-Founder & CTO of Wearism

3D reconstruction and pose estimation expert. Developed the height prediction and body analysis pipeline.

Mr. Pir Sami Ullah Shah – Technical Advisor

Assistant Professor, National University of Computer and Emerging Sciences, Islamabad. Provides strategic guidance on AI architecture and model validation.

Wearism is not another fashion app.

It is the intelligence layer for how fashion should work.
